

Food-climate change

Climate change, and food insecurity is not a distant-future concept, it is happening right-now. Climate change is the greatest challenge to mankind in the 21st century It extreme weather events, and disproportionate effects is causing economic downtrodden across the world rendering the global south more susceptible to extreme poverty. Speaking of disproportionate effects and food insecurity, about 9.6 million people in Sahel and West Africa are already food insecure. While about 7.1 million are Nigerian, some 3.5 million are malnourished children, and others are facing phase 5 famine

About us

Essence Greenery is a multipronged climate-food hub that is offering innovative solutions to poverty, food insecurity and malnutrition while lowering carbon emission in the food systems. It is a paradigm shift against the business-as-usual in addressing the complexity of climate change, hunger, and food insecurity particularly in Africa.

Food insecurity is a global problem, malnutrition is accountable for about half the deaths of children under 5years. Concurrently, the ignorance and negligence of our past is rendering our environment uninhabitable.

Vision

To transform the African food systems to address poverty, and food insecurity sustainably To connect every households in an urban neighborhoods systematically to access fresh. affordable and nutritious food using our digital

Mission

We are building a resilient Africa society using agricultural transformation as a pivot to address food insecurity, poverty and hidden hunger while concurrently and consciously reducing agricultural carbon footprint.

Strategy

- Business oriented: we see farming as wealth and not means of survival
- · Collaborations: To forge collaborations and work in partnership with local. regional and inter-national organizations who share our vision
- Produce consumer-valued-chain food for healthy nutrition enabling options for people to make informed personal nutrition decisions.
- · Waste reduction: to eliminate waste and prevent post-harvest lost innovatively
- · All-year-round farming: we promote all season farming in the peri-urban for maximum pro-duces and yields.

Partnership/Investors

The concept of food insecurity and greenhouse gas emission is global, though action is local, but impacts is global. That is why we are inviting global thinkers (private individuals, agencies, institutions) that share our sentiments to partner or invest with us because we cannot do it alone

Why invest/ partner with us

Our first partner is the environment and then you. We want to expand with your unique resources, we want to share our wealth with you while creating a sustainable future for us. Concurrently, offsetting your carbon emission and very importantly creating wealth for yourself exponentially

How

- · Do you know that the estimate current proportion of global land use for food production is 40% that could go 70%? (depending business-as-usual and popula-tion growth)
- Do you know that half of the 40% arable land is in Africa? And it is projected to grow to a trillion-dollar market in the next 15

We are new, small but with large heart organization that sees the food system (poverty and Zero hunger) a microcosm of the SDGs. We want to create create a better world for people and nature. We want to feed while still nurturing the environment. While we struggle to address sustainability we also acknowledge inequality and inequity, those that do not have the privilege like we do. They that can barely meet their daily need.
